Catherine Reidy '13
Psychology major
Global macro and comparative analytics researcher, Eurasia Group, New York, New York
Clarendon Scholar, University of Oxford

"Studying psychology is interesting because you learn a lot about yourself in the process—things that make you think and develop. I've always been intrigued with the study of the human person and the way that we interact with others in society. Every single class I've taken, the professor is so passionate about what he or she is teaching that it makes it hard for you to not catch some of that enthusiasm.

"My advisers taught me the meaning of research integrity. They inspired me to care more about the world outside of my own interests—to do research and work that matters and that will make a contribution."

Curriculum requirements

Psychology: Science, Practice, and Policy Seminar
