 Partners in Health, Mexico
 Pathways Development Initiative, Uganda
 Teach for America, New Orleans, Louisiana

Emily Vincent '18
Anthropology major
Yenching Scholar,
Peking University, Beijing, China

"I chose Anthropology because I realized it was most important to study what I was passionate about — the diversity and complexity of humans and their cultures all over the world. I knew that if I committed wholeheartedly to an area I was truly interested in, I would create my own opportunities.

"Anthropology's flexibility was immensely beneficial. My professors provided me with the framework and the freedom to dive deeply into my own interests. I gained a broad understanding of all that Anthropology encompasses, while also focusing specifically on my interest in China.

"Now as an international student at Peking University, I use Anthropology on a daily basis. Studying Anthropology taught me how to dig deeper than the apparent cultural differences to find the underlying human experience that connects us all. It showed me the importance of evaluating situations from multiple cultural perspectives and the validity of viewpoints that may seem strange or foreign at face value.

"Anthropology equipped me to ask better questions about myself and the world while preparing me to seek the answers through my own experiences."

35% go to graduate or professional school

Anthropology: Emory University, Ohio State University, University College London, University of Colorado, University of Texas at Austin, University of Wisconsin
Archaeology: University of Arizona, Washington State University
Artifact studies: University College London
Environmental science: University College Dublin
