12 credits of 30000-level electives

6 credits of 40000-level seminars

Additional 30000-level elective or 40000-level seminar

Max Siegel '22
Psychology major

J.D. student, Georgetown University Law School

"The most beneficial part of the Psychology program was the freedom it granted me to explore my interests. I was encouraged to major and take classes in different fields of study that piqued my curiosity.

"The most valuable skill that I developed was learning to understand that people's lived experience is just as valid as your own. This was an area of large personal growth for me, and benefited me as an undergrad and when meeting and talking to new people in law school. Everyone's always told me that one of the best ways to get ahead in life is to be a kind and genuine person — I feel like Psychology has helped me trust that idea.

"Studying Psychology has immediately benefited me in law school — it surprised me how much I was using Psychology to frame my thinking. The various courses I've taken have helped me extend my understanding of the cases assigned in my current classes.

"Psychology gave me a strong foundation in understanding common barriers that people face in decision-making — I have used my understanding of biases, for example, to better my understanding of court decisions ruled based on the context that the law was created in."
